DESCRIPTION

The HCC4007UB is a monolithic integrated circuit, available in 14-lead dual in-line plastic or ceramic package and plastic micropackage.

The HCC4007UB type is comprised of three n-channel and three p-channel enhancement type MOS transistors. The transistor elements are accessible through the package terminals to provide a convenient means for constructing the various typical circuits as shown in typical applications. More complex functions are possible using multiple packages. Numbers shown in parentheses indicate terminals that are connected together to form the various configurations listed.
